

At the turn of the millennium, the commencement to the manned space program just three decades before
for peace

the banded endeavour shall find continuance now here with this Executive Order

the organization be formed to guarantee this outcome warranted by this Civilization's in one culmination, for
Space the Frontier shall it open with the embrace of humanity's Destiny by this Nation

who shall preside over the complex of tasks that fetch awe and terror casting
bodies too minds and souls to the vastness to inhabit to learn to philosophize the ultimate cosmos beyond all
make but God beyond in that hand by clockwork unbeknownst to those of us below the heavens should come
to an inkling?

The truth of human existence asserted through the pure postulation of being in space the human beings the
built formulations the framework infrastructure In the staying power of light we work by works to last by
minutes stretching to a century and a half would have realized something of that Dream that a world be made
beyond artifice on Earth

To reflect, the opening of the frontier into which we come, in Peace

by generations of American space professionals by each generation grows
earning a place in the field of industry, America! Give glory to this field of wide-eyed dreamers
from astronomy of civilization a culmination
technology of America
novel actualizations
man in space
so the mission continues

Manned missions programs a nobler cause for our space works
looking for American leadership that leads away the thinking space as a domain for military affairs
manned missions program is the way to venture forth space unites us

The celestial sphere was the vestibule the exteriority thus defined herethereto what is outside of the whole
herein the site the domain the entirety for our consideration ahead where our built formulations are to lie and
revolve what inner space to our mind to perceive as the domain to our Home
The stage oh even as defined so grand the vastness of distance nevertheless reduced to proportion the distances
between points in motion by a Cartesian notion made sensible to the abstract mind
as disinterested mathematical space that houses the drama of celestial motions
The revolutionary habits were then called the crystal spheres they were the high planes specially discovered by
way of the great conglomerates of mass in motion at a velocity by no means a simplistic thing they were the
action resultant by the planetary bodies. The orrery's clockwork but a small effort a tiny model for the mortal
mind to see with and thro' to the grand harmonies yet escaping the attention of the modern busy soul

leave the world venture into unknown frontier, for peace

backward gaze the worlds on earth tending towards prosperity and peace amongst men and nations

the endeavour fair and for fairness on the earth

extend civilization and its goods off the planet earth and beyond the cradle

passage through the beyond and set homes there so the gaze could be upon the immensity what shielded from view from this earth's dwellings

that men should gaze upon what yet known which spells infinitude all the terra and vistas to be treaded upon

the field expands
that on Earth worlds upon worlds that there in space worlds beyond worlds

ribbons and colors of the world iridescent in flight to represent the human strife become endeavour of conquest of
what was before unknown to be known by human sight and technological instrument

To set forth that we are committed to space endeavours

the sum to be allocated is par annum, upon conditions requiring steady progress be made so for milestones to be reached in the inhabitation of outer space

This sphere to our domain

a design
infrastructural processes and schedules, routes paths trajectories in plotted map, stations and beacons
light signal houses, communication nodes and net, refuelling stations

To draw from first instinct

the cosmogonic impulse to generate a world

stewardship of technological application in outer space

streamlining development for the emergence of infrastructural processes

development of our cosmos within the ultimate cosmos of the universe
humbly forward this is the domain to our generation that can be to our make

Time opens the cosmos newly generated dream to ascend to great expanse; the philosophy contemplates.

The Executive power of this office intact, the exercise of this power to uphold the American commitment to space traversal and outer space stationing

this American endeavour to receive the benefits over regular term renewal to sustain the program of manned missions and all its associated businesses and missions that which is necessary the motivating cause

The place of America amongst the stars

The setting into demonstrable schedule the future of space endeavours lies in exacting the definition of plan scaled goals and its related efforts in expansion. The pertinence of plan in place, the setting up of the schedule to the map of necessary technologies the basis to commencement of a sustainably executable schedule with prominent milestones and trajectories

If the high civilizational goods does raise the endeavour into space as one of its own, that they do raise that the Endeavor into Space is to be a civilizational good

As this nation erected a road to outer space
through

the task insurmountable by petty disputes and minor differences
called mission

If society should recall the fervour the passion for Apollo then hope be fulfilled for humanity that strives to go to space and enact human presence in a new context

should promote the endeavours to that constituting a high civilizational good recognizing that these have culminated from fields of civilization called knowledge and technology

Beyond all the horizons on the Earth the one horizon of the infinite expanse nearly unfathomable but for our venturing bodies forth humans will situate in that place there in a configuration of our own making spatially technologically humanistically amongst the stars in omnidirection

enactment of an affair of the worlds for the worlds, by America
of Peace, the strife for more, in cooperation the partaking of the pursuit upon a profound goal
to breath human existence beyond the cradle into the great beyond the ultimate cosmos of the physical spatiotemporal fabric of the universe with its celestial bodies and grand phenomena

For few now will go but many later that in this future a way lays forth a world to become an order of men and women, in outer space, in strife for a new utopia this yet reaching thought of the common vernacular tongue nevertheless takes the preparation of tens of thousands, in thought, to mind, in organization, of techniques and technologies

A culture will be raised by those who go and those who go with them but stay at home on Earth for these we must sound bells and raise a tone an ecology

funds
on a sustaining cycle
fulfill the set agenda
on time

to see thru to a celestial orbit or to set down on a body's terrain
to set a station to a location each in motion realization of human presence in the harmonies of motion of the solar system

the orchestration of configuration
a schedule to the map

The postulation by this Office to expand the manned missions space program
cyclically renewing commitment
promise and deliver funding
what contained in the maintenance of thrust in forwarding each mission and each project And
the program in General

Let this commencing party open the aperture to the vistas awaiting human presence
the proposition resting upon the assumption of longevity of the human race

the expansion of humanity into the open televista the enclosure by ascription what delimits our
ventures, for now, into the infinite expanse
multi planetary cross traversal existence in the wider sphere

The oasis of Earth (the blue and green orb the cosmic ion of life)
let the brave men and courageous women look back and see the humanity as one

the lonely island of planet earth cede the loneliness to the cosmic hymn of
celestial bodies singing through purest vacuumous fabric of space and time in harmony

(the cursory round a survey reach of our technologically enabled craft outline of trajectories)

The where in space amidst the relations by gravities relational gravities the possible trajectories and
stationing points within

what of our own relational what can be generated to place into situation of our own the crafts thus they
move within our configurations?

into the vacuum a place instate a configuration into the expanse tied anchored by a running mapped
the oscillations of traversing crafts and motioning stations in movement relative to each other

What logic to be set in place as today's program be extensible by complex extrapolation into each time paced
future, as though in accordance to a plan, a greater design to be concerned and understood so in time applied to
a substantiable schedule

the public to know how and what to transpire through real effort by organization will yield fruit to the
dream of the space frontier beheld so long already by the nation, to fruit to be seen by the world, Amazed
our commitment to the utmost of these cognitions and dreams of outer space

the ultimate

the beyond

the true realm holding denomination for the world over

so steps should tread by a steady pace for all humanity to know those reaches are possible to even the
grandest stage

Our astronautics, cosmonautics, technologicis, humanistics tread further than the circumference of this earth
to reach the omnidirectional circuits that we will arrangement by imagination and
rationality

to fit with the great orbits of the miraculous spheres that hang in motion in the universe at large

To advance the human proposition from the premise is to know human Destiny is in space

Mission project enterprise specificity give way to a field of industry
industrious illustrious to stand against other nations in leadership commitment, expertise,
experiment, experience, and future orientation and position well founded positioning

exact the state of advancing adventure future tilt that further frontier is at hand

program rolling forward, speeding up, building velocity, ascending, reaching escape velocity

bringing the edge of the known made global universe into the vast emptiness into which we will tread

Tomorrow's empire, future utopia the world in outer space to be made
so afford humanity's existence there where human beings are situating the ultimate cosmos at large

a situation unique from all the worlds on Earth locations in motion
unlike anything found in the worlds we have dwelled requires special fabrication of the
utmost quality, and Plan

Let the east and the west the north and the south coincide in this dream of expanding the reach of humanity of discovering the place of humanity in the expanse

Time opens to develop the way to a fairer entry with expanded capabilities into outer space. The efforts to develop the crafts, support the missions, and generate the infrastructure for the opening of the frontier at this optimal moment in history should expand in a coordinated manner and gain in sophistication as efforts streamline into a sustainable program. The leadership demonstrated thus far to appropriate the opportunity as a common high ground and long term objective for peace amongst all the nations by the manned missions require new thinking, new designs, new crafts, new human faculty requires all the novel innovation and pure motivation to succeed

a cyclical replenishment of funds so a sustained pace of serious development is possible
Towards the goal of sustained human presence beyond low Earth orbit
so that strides could be said to be made on long term time
The objectives of routine traversal of the vacuum and novel stationing demands new crafts and mission knowledge
Sums well suited for its goals, considering to span of intervals the achievements of milestones to set the table for the dispensing of funds on a cyclical schedule
on pace with the assurance of growth to program that the national effort be recognizable by any serious review and progress be lauded by other nations

motivation for progress be founded within our Nation
nurture in support and funding to ensure the incremental maturation of program towards its general objectives

The Dream is carried by our conjecture still by NASA for the steps it has treaded to reach today's achievements so prolonged and enduring the effort to assure that the endeavour to

The action to take today is the commitment

that laying tracks and maintaining stations near to Earth mark a beginning but not merely a start yet the endeavour be set into our heart as Destiny so this voyage by many to come becomes established as an undertaking at terms indefinite by the nation herself; the with the organization and know how, techniques and technology in steady development

If by the stars we mean someday nothing will be done today

so ascriptions of delimitations are to necessity of sure growth

our understanding is that human ventures are possible to a boundary of the indefinite skies so a bound be drawn to draw to purview the space we mean to venture and that is all within the inner solar system where the outer limits is Jupiter yet the line demarcating our ventures somewhere half way between Mars and the asteroid belt

now we pause to contemplate that immense domain

and understand that by the rhythms of the orbits of the celestial bodies we can fit trajectories of our crafts within and let traversal and stationing in plan and later execution situate within this realm

our purview focusing and our efforts steadying to this big plan we ought to let fall to a schedule spanning a hundred and fifty years what milestones we set and let space flight aflight

Let spaceflight aflight into perpetuity! We may know our place as humanity as a race of Earth to situate the large ultimate cosmos of the unbounded universe

The scale of the coming work is incommensurable and for this grandeur we grow our efforts in commerce and private sectors yet administration and central actions to coordinate, to raise common infrastructures, to uphold the dream, we imagine the NASA to continue its national agency to
